Aurora Borealis. An elderly gentleman in Cushing, who had given much of his time to the investigation of the natural phenomena of the universe, has recently advanced a new theory concerning the display of Northern Lights, otherwise known as Aurora Borealis. He believes in an open Polar Sea, and that its waters during some portion of the year are pacific. But during a certain period its waters are strongly convulsed by the visitation of strong winds, which blow more fiercely around the North Pole than on any other part of the globe; indeed, they are utterly irresistible in their intensity. The waves raised by such giant agency beat against the icy mountains which encircle the Polar Sea with such fury that enormous quantities of spray are thrown skyward. This spray, when it reaches a very high elevation is lighted by the sun, whose rays are reflected through the moist northern atmosphere. It is this distribution of light through the atmosphere that produces the Northern Lights, and the constantly changing spray and reflected light produces the shifting movements of the Aurora Borealis. (Lawson Journal Cor.)

The Father of the Concord. Mr. Bull did not wear in well-doing. Year after year he planted grape seeds, and from the seedlings he obtained many rare and excellent varieties of grapes, harkening down the Concord from 22,000 and there remained twenty-one, which he recommended for cultivation.

The Hon. Marshall P. Wilder, Patriarch of Pomology, in a recent letter to me, says that Mr. Bull "is and ever has been a most worthy, unpretending gentleman. For a long course of years he has devoted his energies and skill to the production of new grapes, by which he secured the famous Concord Grape some thirty years ago, since which no other modern variety has been so extensively cultivated in our northern climate, or so appreciated by the public. Had Mr. Bull done nothing else for the benefit of mankind his name would be held in grateful remembrance while the fruit of the vine shall cool the parched throat, or its juice make glad the heart of man." (Rural New Yorker.)

Major B. B. Johnson.

Major B. B. Johnson of the new city of Waltham, who has long been unspoken in temperance matters, among other things in his inaugural, thus wrote to me: "The license law is rather a 'law of regulation and restriction.' The children have voted to permit the sale of wine and beer, upon rests the responsibility of the permitted traffic in liquors. I can give no instructions. As a man, and citizen, I stand where I always have, against the sale, in toto. As mayor, I must perform the ministerial duty of signing all licenses granted by you. I recommend that none be granted for sale of liquor to be drunk on the premises, and none to be exercised in dwellings by women or minors, and none to druggists, except for medicinal, medicinal or chemical purposes, as the most mischievous tippling shops are some of the open drug stores on Sundays, and I am sure that druggists will counsel together, and agree to observe the Lord's day by closing, except for answering physician's prescriptions."

Seven-five years ago the first tomato in this country were cultivated as a strange and showy horticultural curiosity in a garden in Salem. Forty years ago or a little more, they began to be used as a vegetable in the home. Last year nearly seventy-five million cases of tomatoes were packed in this country, but this year, owing to a deficiency in the crop, the number of cases packed was only about five million, but is nearly one can for every man, woman and child in the United States.

A Mormon editor of Salt Lake City had the following in a recent number: "The unknown woman who was killed at this place about three months ago by the cars proves to be one of the wives of the editor of this paper."

"Food Frauds" Explained.

The article entitled "Food Frauds" circulated through the newspapers and intended to appear in the issue of the 10th inst. is an advertisement for the "Food Frauds" of the Boston Herald, and is a gross misstatement of the facts. The article is a gross misstatement of the facts. The article is a gross misstatement of the facts.

Our many customers may say on all goods made by us being strictly as represented in every particular. We use nothing in the manufacture of our goods but wool and we are the most complete for variety of shades and weights to be found anywhere.

THE SLIGHTLY IMPROVED LADY'S BLANKET.

The slightly improved lady's blanket, advertised in our last week, is nearly gone. The highest of the grades, and the very low prices at which they were offered, caused the supply very rapidly, only a few remain now. Call and secure one of these bargains.

We have just purchased a stock of all silk Satin and Gros Grain Ribbon, L'Etoile!

a first-class quality, at about 60 cents on the dollar, comprising the leading staple shades, and shall offer them, No. 5 at 9c. Worth 12 1/2c. No. 7 at 11c. Worth 15c. No. 9 at 14c. Worth 20c. No. 12 at 18c. Worth 25c. No. 16 at 21c. Worth 31c.

This line will be shown on a separate table, away from our regular counter. In order to give opportunity to our retail trade to examine this bargain, none will be sold to the wholesale trade.

WM. S. BUTLER & CO., BOSTON.

SHOOTING RULES.

For the benefit of those who are too apt to supply the "accidental" shooting, we have compiled a few simple rules, says the San Francisco News-Letter, which more experienced sportsmen have long recognized as essential to safety, the etiquette of the field, and an appreciable amount of comfort while hunting others.

First—Never in just or thorough carelessness point the muzzle of your gun in the direction of another person. Second—Unloaded guns have caused countless deaths and maimings by a disregard of this primary law, while carelessness in loading through breach without a due regard as to which way the gun is pointing has put a sudden and sad end to many a day's sport.

Second—Never carry a gun with the hammer down. A careless touch of the hammer would cause the discharge of the gun, and the expression was originally used to indicate that the gun was loaded. This is not very safe, as the hammer may be touched by the finger, and the gun discharged. A safer plan is to carry the hammer up, and the gun pointed in the air.

Third—Always take the cartridges out of your gun before entering a house or leaving your gun against a veranda. The gun may fall or be thrown, and the cartridges may be discharged, and the house or veranda destroyed.

Fourth—Always take the cartridges out of your gun before entering a house or leaving your gun against a veranda. The gun may fall or be thrown, and the cartridges may be discharged, and the house or veranda destroyed.

CHLORAL AND BROMIDE POTASSIUM.

Again we have to record with deep regret a sad proof that who give or take chloral or bromide of potassium for the cure of nervousness, or for the cure of sleeplessness, are guilty of a deplorable error and grievous wrong. The medicine which poison deep also deprave the higher nerve centres, and the controlling powers of the will and leave the mind a prey to the depressing influence of a conscious loss of self-control and self-direction. The cultured mind feels the ignominy of the intellectual and moral degradation with great acuteness, and in the end the victim is left a prey to the most degrading and self-destructive influences.

Our many customers may say on all goods made by us being strictly as represented in every particular. We use nothing in the manufacture of our goods but wool and we are the most complete for variety of shades and weights to be found anywhere.

Scientific.

There is a sort of vine which grows in the hills of China from a tuberous root. Its leaves die away annually in November, and shoot out again in March. From its fruit a kind of wine is produced, which M. Sannin has examined, and has found its acidity to be high.

When conchoidal tubes are badly varnished, the experience of M. Linné leads him to say that they are very dangerous in some chemical operations, the presence of sulphur and of antimony sulphide rendering them especially so in the preparation of oxygen gas.

Experiments made for the purpose of testing the influence of pulps and other artificially prepared foods on cow milk by MM. Andouard and V. Desanay during the years 1883 and 1884, led to the conclusion that the milk thus obtained was of a lower quality than that obtained from the cow, but had the effect of increasing the quantity of the butter, without any appreciable bad result on its quality.

M. L. Thomsen concludes from a comparative study of different accounts of the solar corona recently observed in Britain, at Nice, and at other places, that these phenomena are not merely halos, but true coronas—that is to say, an effect of diffraction produced either by the sun's rays or by light particles of moisture existing in the elevated strata of the atmosphere.

Two grand engineering schemes, the experience of M. Linné leads him to say that they are very dangerous in some chemical operations, the presence of sulphur and of antimony sulphide rendering them especially so in the preparation of oxygen gas.
